

25mm Recycled Asphalt Base Aggregate

Our 25mm recycled asphalt base aggregate is found at our Calgary yard location, and meets all sieve requirements for base gravel that the City of Calgary requires. This is a 100% post-consumer product and ideal as an alternative to crushed gravel on any standard commercial or LEED project. Crushed from asphalt rubble disposed of at our sites instead of paying costly landfill fees, this material has been used on many commercial and municipal projects throughout the City for gravel yard top courses and base gravels for asphalt paving areas.

Benefits of Fish Creek Excavating Asphalt Aggregates:

- City of Calgary sieve specification conforming
- Aesthetically pleasing finished look
- Less dusty than other granular products
- Environmentally friendly
- 100% post-consumer product
- Similar pricing to local gravel sources
- LEED product

25mm Recycled Asphalt Sieve Results Vs. City of Calgary Sieve Requirements
